

DIGI-GUARD *LITE*

The Digi-Guard Lite system enables efficient control of your property's access gates via your mobile phone. Give visitors temporary access to your home or business without the hassles of remote controls.

Key Features:

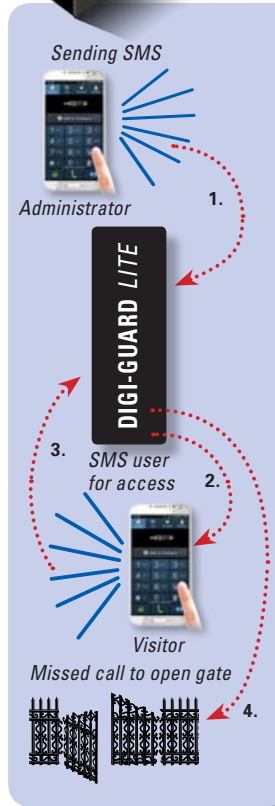

- **Simplicity** – Eliminates the need for physical remotes; open gates with a missed call (FREE).
- **Managed Access** – Grant specified visitors and employees temporary access. Predetermined entries/exits and amount of days allowed.
- **Remote Management** – Regulate the entry/exit of domestic workers, gardeners, contractors, etc from any location.

How the System Works:

1. The Administrator (owner) loads visitors' details and access allowances via SMS.
2. The **Digi-Guard** SMS's visitors the telephone number required for entry.
3. Visitors gain entry by 'miss-calling' the number (FREE).
4. Access is denied when the visitors' predetermined entries/exits are exhausted.
5. All transactions are logged and viewed on request.
6. Software updates are done remotely.

The **Digi-Guard Lite** can store up to 1000 users making the system perfect for Gated Estates, Guest Houses, Businesses and Homes. The **Digi-Guard Medium** is enabled for web access.

Enhance the security of your property with The **Digi-Guard Lite** – an advanced Access Management System developed by **Innovations New Product Design**.
